

JARR GLOBAL

THE EFFECTIVE FACILITATOR

Business Plan

An assessment-led learning platform for judgment, self-awareness and human agency in AI-mediated work.

INVESTMENT OBJECTIVE

US\$300,000 pre-seed funding to validate a repeatable global assessment-and-learning business.

Prepared for angel and early-stage investors

14 August 2026 | Base case | US dollars

Confidential — This document contains forward-looking assumptions and is not an offer of securities.

HOW TO READ THIS PLAN

Facts about the live MVP and founder are separated from proposed strategy, management assumptions and forward-looking projections.

1. Executive Summary

The Effective Facilitator (TEF) is an assessment-led learning platform designed to strengthen the human capabilities required when work is increasingly mediated by artificial intelligence. It helps facilitators, consultants, team leaders and organisations examine how they respond to influence, uncertainty, responsibility and control—and then directs them towards relevant developmental practice.

TEF is operated through JARR Global, Lorraine Villaroel's sole proprietorship. The product currently has a live minimum viable product, three completed disciplines, a working baseline assessment and initial practitioner feedback. The full product is designed around nine disciplines across three developmental paths: Regarding Others, Regarding Myself and Regarding Life.

INVESTMENT THESIS

AI can expand the volume and speed of execution. TEF develops the judgment, agency, curiosity and accountability people need to decide what that execution should become.

The opportunity

Most AI training focuses on tools, prompts and technical adoption. Most behavioural assessments provide a descriptive snapshot. TEF is positioned between those categories: it combines behavioural self-assessment, situational judgment, confidence ratings and AI-use reflection with a structured learning journey. Its commercial model begins with annual individual access, moves through practitioner licences and expands into renewable organisational deployments.

The ask and intended milestone

Capital	Runway	Primary milestone
US\$300,000	15–18 months	Validate repeatable paid demand and complete the nine-discipline platform

The base financial case projects approximately US\$87,000 revenue in Year 1, US\$333,000 in Year 2 and US\$966,000 in Year 3, with positive EBITDA targeted in Year 3. These figures are planning assumptions rather than guaranteed outcomes.

2. Business and Ownership

Current operating structure

JARR Global is the sole proprietorship through which Lorraine Villaroel intends to operate The Effective Facilitator. JARR Global will initially hold the commercial relationships, contract with suppliers and receive revenue generated by TEF.

Proposed investment structure

A sole proprietorship does not issue shares and is generally unsuitable for conventional angel equity investment. Before accepting equity capital, JARR Global should obtain legal and tax advice and establish a limited-liability company capable of issuing shares or an equivalent investment instrument. The TEF intellectual property, software rights, customer contracts and relevant assets should then be formally assigned or licensed to that entity.

GOVERNANCE PRIORITY

Complete the investable entity and IP-transfer structure before executing a SAFE, convertible instrument or equity subscription.

Mission

To help people remain purposeful, accountable, creative and fully human while working with increasingly capable artificial intelligence.

Vision

To establish human judgment and agency as measurable, capabilities that can be strengthened within AI-enabled organisations.

Near-term objectives

- Complete and launch all nine disciplines.
- Validate the assessment framework with qualified expertise.
- Convert initial users into paying individuals, consultants and organisational pilots.
- Establish evidence of completion, renewal, referral and measurable developmental value.
- Develop an investable governance, intellectual-property and data-protection structure.

3. Problem and Market Need

The productivity–judgment gap

Generative AI makes content, analysis and alternatives faster and more abundant. It does not remove the need for human beings to determine what deserves trust, who retains responsibility, when an output should be challenged, or whether a process should be directed, revised or released. Those decisions become more—not less—important as AI becomes embedded in ordinary work.

The World Economic Forum reports that 39% of workers’ core skills are expected to change by 2030 and that 63% of employers identify skills gaps as a major barrier to transformation. Microsoft’s 2026 Work Trend Index frames the emerging opportunity around human agency: as agents take on more execution, organisations must create the conditions for people to direct work, make calls and own outcomes.

Sources: World Economic Forum, Future of Jobs Report 2025; Microsoft, 2026 Work Trend Index.

What existing solutions leave unresolved

Existing approach	Primary value	Persistent gap
AI tool and prompt training	Improves technical use and output generation	May not develop judgment, responsibility or adaptive human response
Personality-style assessments	Creates a memorable descriptive profile	Often weakly connected to applied AI-mediated workplace judgment
Leadership and facilitation courses	Develops knowledge and practice	May lack an integrated baseline, profile and reassessment pathway
Generic online learning libraries	Provide breadth and convenience	Often prioritise content completion over developmental evidence

The buyer’s need

Individuals need a credible way to examine their own practice. Consultants need a structured tool they can use with clients. Organisations need scalable learning that supports leadership, change and AI readiness without treating human capability as a secondary “soft skills” issue.

4. Product and Developmental Framework

The Nine Disciplines

TEF translates an established facilitation philosophy into a practical digital development system. The language is reflective without being vague: each discipline is defined through observable choices, workplace tensions, AI-era failure modes, knowledge checks and applied exercises.

Developmental path	Disciplines	Primary orientation
Regarding Others	Detachment • Focus • Engagement	How I relate, respond and participate with others
Regarding Myself	Interior Dialogue • Intentionality • Sense of Wonder	How I examine purpose, interpretation and possibility
Regarding Life	Awareness • Action • Presence	How I notice, intervene and remain engaged with what is unfolding

Current MVP

Component	Current status
Live product	Available
Completed disciplines	Detachment, Intentionality and Sense of Wonder
Baseline assessment	Working initial assessment across the three completed disciplines
Learner profile	Initial development snapshot
Practitioner feedback	Early qualitative signals collected

Full product vision

The funded product will combine all nine disciplines, a more robust assessment engine, longitudinal profiles, consultant-facing materials, organisational administration and reporting. This creates a platform that can grow beyond course access into reusable assessment, facilitation and workforce-development infrastructure.

5. Assessment and Learning Experience

Baseline assessment

The full baseline is designed to combine four forms of evidence. Behavioural self-report captures the learner's stated tendencies. Situational judgment tests applied choices in realistic dilemmas. Confidence ratings expose differences between certainty and demonstrated judgment. AI-use reflection examines how the learner retains responsibility and responds to uncertainty in AI-supported work.

Assessment component	Function	Scoring treatment
Behavioural self-assessment	Captures reported tendencies across the disciplines	Quantitative; includes balanced and overuse indicators
Situational judgment	Tests response quality in context-rich dilemmas	Quantitative; weighted for context-sensitive judgment
Confidence ratings	Shows perceived confidence under difficulty or pressure	Displayed separately from capability
AI-use reflection	Explores responsibility, questioning and intervention	Mixed; reflection informs interpretation rather than diagnosis

Initial profile

- Nine-discipline capability map
- Authority, ambiguity and control orientations
- Current strengths
- Development priorities
- Possible overused tendencies
- Recommended starting modules

PROFILE DISCLAIMER

This profile reflects how you currently report responding in selected situations. It is not a diagnosis or fixed description of who you are.

Development loop

1. Assess	2. Interpret	3. Develop	4. Reassess
Complete baseline	Receive profile	Follow recommended modules	Compare patterns over time

6. Customers and Market Opportunity

Primary customers

Segment	Need	Product entry point	Commercial role
Individuals	Stronger judgment and facilitation practice	Annual assessment and learning access	Low-friction acquisition and learner data
Consultants and facilitators	A structured client-facing development tool	Annual professional licence and materials	Trusted distribution channel
Organisations	Leadership, change and AI-readiness development	Renewable cohort licence with reporting	Higher-value recurring revenue

Global launch position

TEF will be positioned as a global English-language product from the outset. Digital delivery reduces geographic constraints, while founder-led outreach can initially concentrate on English-speaking facilitation, organisational-development, leadership-coaching and HR/L&D communities. The Caribbean can provide accessible pilot relationships without defining the ceiling of the opportunity.

Market-sizing approach

Reliable public data does not isolate a single “AI-era facilitator capability” category. Accordingly, TEF should avoid an inflated top-down market claim and use a transparent bottom-up planning proxy until paid acquisition and organisational conversion data are available.

Planning population	Illustrative volume	Blended annual value	Indicative opportunity
Individual and consultant practitioners	250,000	\$199	\$49.8M
Potential organisational buyers	20,000	\$7,500	\$150.0M
Indicative serviceable market proxy			\$199.8M

Management planning proxy only. Volumes are unverified assumptions for strategic sizing—not third-party market measurements.

Year 3 base-case revenue of approximately US\$966,000 would represent less than 0.5% of this planning proxy. The more important near-term task is to validate willingness to pay, renewal, channel productivity and organisational expansion.

7. Competition and Differentiation

Competitive set

TEF competes for attention and budget across several adjacent categories rather than against one exact equivalent. Illustrative alternatives include behavioural assessments such as DISC, MBTI and CliftonStrengths; learning libraries such as LinkedIn Learning and Coursera; facilitation and leadership programmes; and emerging AI-literacy or responsible-AI training.

Capability	Personality assessments	Leadership courses	AI-readiness courses	TEF
Behavioural self-report	Strong	Variable	Variable	Integrated
Applied situational judgment	Limited	Variable	Variable	Core
Developmental module pathway	Limited	Strong	Strong	Personalised
Confidence–performance comparison	Rare	Rare	Rare	Designed
AI-use reflection	Rare	Limited	Strong	Integrated
Practitioner/client deployment	Often	Sometimes	Sometimes	Core model

Differentiation

- Assessment-led rather than content-led: the learner begins with a profile and development priorities.
- Developmental rather than diagnostic: the system treats capability as capable of growth and overuse.
- Contextual rather than abstract: dilemmas focus on tension-filled, AI-mediated workplace situations.
- Practitioner-enabled: consultants can embed TEF in client work, creating a distribution and service layer.
- Longitudinal potential: reassessment can show movement over time and enable organisational benchmarks.

Defensibility

The course content alone is not the long-term moat. Defensibility will depend on the scoring model, scenario bank, longitudinal learner data, validated interpretation logic, consultant workflow, organisational reporting and brand credibility around the Nine Disciplines.

8. Business Model and Pricing

Annual-access model

Tier	Proposed annual price	Included value	Renewal logic
Individual	US\$59 base case	Assessment, personal profile and learning access	New modules, reassessment and progress
Consultant	US\$249 base case	Professional access, client application and materials	Practice use, updates and client value
Organisation	US\$2,500–15,000+	Cohort access, administration, reporting and support	Annual deployment, new cohorts and reporting

Revenue expansion

Revenue can expand through additional modules, reassessment, premium reports, facilitated debriefs, consultant certification, organisational benchmarking and partner-delivered programmes. These extensions should be introduced only after the core product demonstrates completion, usefulness, willingness to pay and renewal.

Unit-economic priorities

Metric	Why it matters	Early target direction
Customer acquisition cost	Determines whether self-serve and practitioner channels scale	Measure separately by segment
Gross margin	Shows the economics after hosting, support and delivery costs	Maintain above 80% in the base case
Completion and activation	Indicate whether purchased access becomes genuine use	Improve before expanding paid acquisition
Annual renewal	Validates recurring value	Track individual, consultant and organisation cohorts separately
Consultant-sourced revenue	Tests distribution leverage	Increase as professional materials mature

9. Go-to-Market Strategy

Phase 1 — Prove

Founder-led outreach will recruit facilitators, consultants, leadership coaches, OD practitioners and HR/L&D professionals into structured beta and paid pilot experiences. The objective is not broad awareness; it is evidence of resonance, completion, willingness to pay and referral.

Phase 2 — Equip

Consultants will receive professional licences, debrief guidance, client-facing materials and pilot support. This turns trusted practitioners into a distribution channel while revealing which workflows, reports and safeguards they need to use TEF responsibly.

Phase 3 — Expand

Evidence from practitioners and pilot cohorts will support targeted organisational sales and partnerships with training providers, professional associations and leadership-development firms. The organisational offer will emphasise development, cohort insight and repeat deployment rather than surveillance or employee diagnosis.

Core channels

- LinkedIn thought leadership grounded in practical AI-era facilitation tensions.
- Founder-led workshops and demonstrations.
- Practitioner referrals and consultant-delivered cohorts.
- Partnerships with training organisations and professional communities.
- Targeted pilots with HR/L&D, leadership and transformation teams.

Pilot design

Stage	Evidence required	Decision
Free validation	Usefulness, comprehension, completion and referrals	Refine content and assessment
Paid practitioner pilot	Purchase, completion, client intent and repeat use	Validate annual professional licence
Paid organisation pilot	Activation, sponsor value, participant response and renewal intent	Validate deployment and reporting package

10. Operations and Product Roadmap

Delivery model

TEF is delivered digitally, with optional facilitated debriefs and organisation-specific support. JARR Global will initially use a lean operating model: founder-led product and content leadership, contracted software development, specialist assessment advice, part-time customer success and focused marketing support.

15–18 month roadmap

Period	Product	Commercial	Evidence
Months 1–3	Stabilise MVP; confirm architecture; establish data and consent controls	Recruit design partners and paid practitioner beta	Baseline completion and usability
Months 4–6	Complete next disciplines; improve profile and reporting	Launch annual individual and consultant access	Conversion and completion
Months 7–12	Complete nine modules; add consultant workflow and admin tools	Deliver first paid organisational pilots	Sponsor value and renewal intent
Months 13–18	Refine scoring; add reassessment and cohort reporting	Expand partnerships and repeat deployments	Recurring revenue and repeatable sales

Operating capabilities required

- Product and engineering
- Learning and content design
- Psychometric and assessment validation
- Customer success and pilot delivery
- Sales, partnerships and marketing
- Legal, privacy, security and financial administration

Data and technology principles

The platform should collect only the data necessary to deliver assessment, profile and learning functions; obtain clear consent; separate individual development from employer evaluation; document automated scoring; and implement appropriate access controls, retention rules and incident response. These controls are central to trust and enterprise readiness.

11. Assessment Validation and Intellectual Property

Validation programme

TEF should not present the profile as a clinical diagnosis or fixed personality measure. Its credibility will depend on disciplined validation of item quality, scoring consistency, interpretation, fairness and developmental usefulness. Qualified psychometric or assessment expertise should guide this work.

Validation area	Initial action
Content validity	Map every assessment item and scenario to an explicit discipline construct and behavioural indicator
Reliability	Test internal consistency and stability with appropriately sized samples
Scenario scoring	Use expert review and pilot evidence to calibrate response quality
Fairness and accessibility	Review language, cultural assumptions, disability access and adverse interpretation risks
Interpretive validity	Test whether profile statements are supported, understandable and developmentally useful
Outcome evidence	Measure completion, behaviour intentions, reassessment movement and workplace application

Intellectual property

JARR Global should maintain dated records of the original framework, curriculum, assessment items, scoring logic, brand assets and software contributions. All contractors should sign agreements addressing ownership, confidentiality and assignment of work product. Relevant trademarks, copyright registrations or other protections should be considered with professional advice in priority markets.

Responsible-use boundary

NON-DIAGNOSTIC POSITIONING

TEF profiles development patterns reported or demonstrated in selected situations. They should not be used as clinical judgments, employment screening decisions or fixed descriptions of identity.

12. Founder and Team Plan

Founder — Lorraine Villaroel

Lorraine Villaroel is a community-development leader, facilitator and lifelong-learning advocate whose work sits at the intersection of people, technology, creativity and social transformation. Her professional journey spans banking, recruitment, training, nonprofit leadership, community engagement and AI engineering. She brings 25+ years of experience leading and supporting community and nonprofit initiatives and substantial practical experience in facilitation, service excellence and organisational development.

Her founder–market fit comes from the combination of lived facilitation practice, learning design, community-building, operational leadership and current AI-product development. TEF is not a generic course assembled around a technology trend; it is the digital translation of a developmental framework grounded in practice.

Priority team additions

Capability	Initial model	Trigger for expansion
Software/product development	Contracted build capacity	Stable product roadmap and paid usage
Psychometric expertise	Specialist advisor/contractor	Full assessment validation programme
Customer success	Part-time/contract support	Multiple concurrent pilots
Sales and partnerships	Founder-led with targeted support	Repeatable conversion and clear ICP
Operations and finance	Outsourced professional support	Investment entity and reporting requirements

Advisory priorities

The company should seek advisors with experience in psychometrics, B2B learning technology, enterprise sales, data protection and early-stage finance. Advisors should be selected for specific contribution rather than reputation alone.

13. Financial Plan

Base-case revenue assumptions

Driver	Year 1	Year 2	Year 3
Individual annual price		\$59	\$59
Individual licences sold	500	2,000	6,000
Consultant annual price		\$249	\$249
Consultant licences sold	50	180	450
Average organisational licence		\$7,500	\$8,500
Organisational licences	6	20	50

Three-year profit and loss summary

US dollars	Year 1	Year 2	Year 3
Revenue		\$86,950	\$332,820
Cost of revenue	(\$13,043)	(\$46,595)	(\$125,587)
Gross profit		\$73,908	\$286,225
Gross margin		85.0%	86.0%
Operating expenses	(\$280,000)	(\$380,000)	(\$600,000)
EBITDA	(\$206,093)	(\$93,775)	\$240,464

Interpretation

Year 1 is an investment and validation period. Year 2 tests whether consultant-led distribution and organisational renewals can reduce reliance on the founder. Year 3 targets operating leverage as digital access and renewable licences grow faster than fixed operating costs. Positive EBITDA in Year 3 depends on the assumed sales volumes and expense discipline.

Recurring-revenue milestone

The 18-month model ramps monthly recurring-revenue equivalent to US\$10,000, representing a US\$120,000 annual recurring-revenue pace. This exceeds the deck's US\$100,000+ target but should be presented as a management objective, not a guaranteed outcome.

See the accompanying TEF Three-Year Financial Model for formulas, assumptions, monthly runway and checks.

14. Funding Requirement and Use of Funds

Pre-seed request

TEF is seeking US\$300,000 to fund approximately 15–18 months of product completion, assessment validation and commercial proof. The raise is intentionally sized for a focused pre-seed validation programme rather than premature scaling.

Use	Allocation	Amount	Purpose
Product and platform	35%	\$105,000	Complete the nine-discipline platform, profile, reporting and technical foundations
Assessment validation and IP	20%	\$60,000	Specialist validation, scenario calibration, legal/IP structure and documentation
Pilots and customer success	18%	\$54,000	Design-partner support, facilitated delivery, onboarding and evidence collection
Sales and partnerships	17%	\$51,000	Founder-led pipeline, content, workshops, partner development and sales support
Legal, operations and contingency	10%	\$30,000	Investment entity, contracts, privacy, finance and unforeseen requirements

Milestone unlocked

PRE-SEED OUTCOME

A completed nine-discipline product with validated scoring foundations, 6–10 paid organisational pilots, 50–75 consultant licences, 2,000+ learner profiles and a US\$100K+ recurring-revenue pace target.

Instrument

The investor deck references a pre-seed SAFE or equivalent. The appropriate instrument will depend on the jurisdiction and the new corporate structure. Legal and tax advice is required before offering or accepting investment.

15. Risks and Mitigation

Risk	Potential effect	Mitigation
Assessment credibility	Weak claims could undermine trust or create misuse	Use non-diagnostic language; contract qualified validation expertise; publish evidence and limitations
Founder dependence	Sales, content and delivery may bottleneck around one person	Document processes; add specialist contractors; build consultant distribution and repeatable onboarding
Sole-proprietorship structure	Cannot issue conventional equity and may blur asset ownership	Form an investable company and assign/license IP before accepting equity
Market education	Buyers may not immediately understand “human capability for AI work”	Lead with concrete workplace tensions, use cases, scenarios and pilot evidence
Competitive response	Large assessment or learning platforms could add adjacent content	Build scoring data, practitioner workflows, longitudinal insight and trusted brand
Privacy and employee trust	Organisational use may be perceived as surveillance	Separate development from evaluation; minimise data; provide transparent consent and reporting rules
Sales-cycle length	Organisational procurement may slow revenue	Balance self-serve, consultant and organisation channels; use paid pilots with defined decisions
Financial execution	Revenue may ramp slower than the base case	Stage hiring; monitor cash monthly; define minimum proof milestones and contingency actions

Decision gates

Capital should be released against evidence rather than activity alone. Key gates include: completion and activation, paid conversion, consultant client use, organisational sponsor value, renewal intent, gross margin, customer acquisition cost and cash runway.

16. Milestones and Investor Proposition

18-month scorecard

Area	Target	Evidence
Product	All nine disciplines; stable assessment and profile	Released modules, QA and usage
Validation	Documented construct map and initial reliability/fairness work	Advisor review and validation report
Practitioner channel	50–75 annual consultant licences	Paid accounts, active use and client deployments
Organisations	6–10 paid pilots	Contracts, completion and sponsor feedback
Learners	2,000+ profiles	Consent-based platform records
Revenue	US\$100K+ ARR run-rate target	Renewable annual contracts and licences
Company readiness	Investable entity and protected IP chain	Corporate, contract and IP documentation

Why invest now

- A live MVP reduces concept risk.
- The product addresses a growing gap between AI adoption and human capability.
- The assessment-led model creates a clearer path to personalisation, recurring value and organisational reporting than a standalone course.
- The consultant tier provides a credible channel between self-serve acquisition and enterprise sales.
- The raise is directed towards defined validation milestones rather than undisciplined scale.

CLOSING PROPOSITION

The Effective Facilitator can become the development layer that helps people preserve judgment, responsibility, curiosity and agency as AI takes on more of the execution.

Management inputs

Product descriptions, framework names, MVP status, initial feedback, proposed pricing, ownership structure and founder information were supplied by Lorraine Villaroel and the TEF investor-deck development process. Market-sizing volumes and all financial forecasts are management planning assumptions.

Forward-looking statement

This business plan contains forward-looking statements, targets and projections based on assumptions available at the date of preparation. Actual performance may differ materially. Nothing in this document constitutes legal, tax, investment or securities advice, or an offer to sell securities.

Appendix B — Financial Assumption Summary

Category	Base-case assumption
Currency	US dollars
Model horizon	Three years plus an 18-month monthly runway
Individual annual price	US\$59
Consultant annual price	US\$249
Organisation price	US\$7,500 average in Year 1, increasing with scope
Cost of revenue	15% in Year 1, improving to 13% in Year 3
Pre-seed raise	US\$300,000
Break-even direction	Positive EBITDA targeted in Year 3
18-month recurring-revenue pace	US\$120,000 annualised base-case target

Model governance

The accompanying workbook separates assumptions from calculations, includes an 18-month runway, documents external sources and management inputs, and contains model checks. Before investor circulation, JARR Global should update pricing, hiring, tax, legal, hosting and acquisition assumptions with actual quotes and pilot evidence.
